

A SYSTEM AND METHOD FOR USING WEB BASED
WIZARDS AND TOOLS

ABSTRACT OF THE DISCLOSURE

5 A system and method are proposed wherein
knowledge and tools for solving business problems are
accessible through a single distribution point. The
wizard central system and method allows for developing,
approving, revising, searching for and using of web based
wizards or tools. After use, the wizards or tools can be
10 stored in a centralized solution repository for later
retrieval and analysis. The wizards and tools are
categorized based on pre-defined criteria. Searches are
thus limited by the categorization and the user is shown
only wizards and tools which are applicable to the
business problem. The system also provides an approval
15 and revision workflow for the wizards and tools. This
workflow provides the capability of revising the wizard
or tool knowledge base to keep it current with evolving
expert opinion and design documentation.
